

MICROTEX

Flexible and strong soil cover

MICROTEX is a strong micro-honeycomb mulch allowing water and nutrients through. This will avoid you having to weed and will limit watering. Very light, it is easy to put in place. It is important to cover it when it is used in borders or hedges.

Benefits

Flexible and very strong mulch. Cuts down on watering and maintains moisture at the foot of the plants. Its micro-honeycomb structure allows a good flow of water and nutrients. Avoids the chore of weeding. Decreases the quantity of decorative mulch (organic, mineral) to lay.

Characteristics

Micro-perforated polyethylene film. 40 g/m². Thickness 35 microns. Treated with UV protection. Preferably cover.
