

GEOTEX 100

Grey soil cover

MADE IN FRANCE · 100 g/m² · 100% Recyclable · PES

This geotextile is an ideal solution to stabilise the soil and separate layers (soil, pebbles), and prevent weed growth. It permeates water and air, so the soil does not dry around the plants.

Benefits

It can also be placed under cover elements such as gravel, mulch, or decorative pebbles. Simple to place as it can be cut to size. Weed out the area and lay down the textile, and then fix it to the ground with special metal clamps (FIXOL, SPIKE).

Characteristics

Material: PP (poly-propylene), non-woven textile. Weight: 100 g/m2. Grey colour. UV-resistant. Expected useful life: over 10 years.
